

Dynamic Network Analysis (Spring 2020)

Course 17-801, 17-685, 19-640

Instructor

Prof. Kathleen M Carley

Phone: x86016

Office: Wean 5130, ISR

E-Mail: kathleen.carley@cs.cmu.edu

Office Hours: by appointment; contact Sienna Watkins for scheduling
smwatkin@andrew.cmu.edu

Teaching Assistants

Mihovil Bartulovic, mbartulo@andrew.cmu.edu, Wean 4211

Iain Cruikshank, icruicks@andrew.cmu.edu, Wean 4103

Introduction

Who knows who? Who knows what? Who communicates with whom? Who is influential? How do ideas, diseases, and technologies propagate through groups? How do social media, social, knowledge, and technology networks differ? How do these networks evolve? How do network constrain and enable behavior? How can a network be compromised or made resilient? What are network cascades? Such questions can be addressed using Network Science. Network Science, a.k.a. social network analysis, link analysis, geo-network analysis, and dynamic network analysis is a fast-growing interdisciplinary field aimed at understanding simple & high dimensional networks, from both a static and a dynamic perspective. Across an unlimited application space, graph theoretic, statistical, & simulation methodologies are used to reason about complex systems as networks.

An interdisciplinary perspective on network science is provided, with an emphasis on high-dimensional dynamic data. The fundamentals of network science, methods, theories, metrics & confidence estimation, constraints on data collection & bias, and key research findings & challenges are examined. Illustrative networks discussed include social media based (e.g., twitter), disaster response, organizational, semantic, political elite, crises, terror, & P2P networks. Critical procedures covered include: basic centralities and metrics, group and community detection, link inference, network change detection, comparative analytics, and big data techniques. Applications from business, science, art, medicine, forensics, social media & numerous other areas are explored. Key issues addressed: Conceptualization, measurement, comparison & evaluation of networks. Identification of influential nodes and hidden groups. Network emergence, evolution, change & destabilization.

In this course, the fundamentals of network science, the methods, the theories, the constraints on data collection are examined. This graduate seminar, offers an overview and evaluation of the theory and research on networks broadly defined. Student are encouraged to bring and use their own data, or to use one of the large number of datasets available publicly in this area for assignments. Questions addressed include, but are not limited to: How do we conceptualize, measure, compare and evaluate various types of networks? How do we evaluate the impact of policies and technology on using these networks especially given the fact that these networks are dynamic? What nodes, relations, groups, motifs stand out in or are influential in a network? How do networks emerge, evolve, change? What is the difference in analyzing networks as complete graphs versus networks as emerging from a set of links? How can data on networks be collected and what are the limits of these collection techniques?

Prerequisite: Undergraduate-level statistics course or instructor permission. Linear algebra is recommended but not required. Students are encouraged to bring & use their own data, or to use provided data.

Course Content

Lecture slides, assignments and supplemental readings are available for the course on Canvas. Weka data mining software is freely available and can be downloaded from <http://www.cs.waikato.ac.nz/ml/weka/downloading.html>.

Software

Required Software

ORA-LITE, available from CASOS -
<http://www.casos.cs.cmu.edu/projects/ora/>
ORA-PRO --- to be provided by Dr. Carley
NetMapper --- to be provided by Dr. Carley
Note – on all problem sets you must use ORA.

Important Background Reading

Kathleen M. Carley, 2017, “ORA: A Toolkit for Dynamic Network Analysis and Visualization.” In Reda Alhajj and Jon Rokne (Eds.) Encyclopedia of Social Network Analysis and Mining, Springer. DOI:10.1007/978-1-4614-7163-9_309-1

Neal Altman, Kathleen M. Carley and Jeffrey Reminga, 2019, ORA User’s Guide 2019, Carnegie Mellon University, School of Computer Science, Institute for Software Research, Pittsburgh, Pennsylvania, Technical Report CMU-ISR-19-100.

Available Software

AutoMap, available from CASOS -

<http://www.casos.cs.cmu.edu/projects/automap/>

Construct, available from CASOS -

Take care of yourself.

Do your best to maintain a healthy lifestyle this semester by eating well, exercising, avoiding drugs and alcohol, getting enough sleep and taking some time to relax. This will help you achieve your goals and cope with stress.

All of us benefit from support during times of struggle. You are not alone. There are many helpful resources available on campus and an important part of the college experience is learning how to ask for help. Asking for support sooner rather than later is often helpful.

If you or anyone you know experiences any academic stress, difficult life events, or feelings like anxiety or depression, we strongly encourage you to seek support. Counseling and Psychological Services (CaPS) is here to help: call 412-268-2922 and visit their website at <https://www.cmu.edu/counseling/>. Consider reaching out to a friend, faculty or family member you trust for help getting connected to the support that can help.

If you or someone you know is feeling suicidal or in danger of self-harm, call someone immediately, day or night:

CaPS: 412-268-2922

Re:solve Crisis Network: 888-796-8226

If the situation is life threatening, call the police:

On campus: CMU Police: 412-268-2323

Off campus: 911

If you have questions about this or your coursework, please contact Prof. Kathleen M. Carley kathleen.carley@cs.cmu.edu

Assignments, Grading, and Late Work Policy

Homework: 1-6 are each worth 100 points

- **HW1: Release Jan 13th, Due Jan 26th midnight**
- **HW2: Release Jan 27th, Due Feb 9th midnight**
- **HW3: Release Feb 10th, Due Feb 23rd midnight**
- **HW4: Release Feb 24th, Due Mar 8th midnight**
- **HW5: Release Mar 16th, Due Mar 29th midnight**
- **HW6: Release Mar 30th, Due Apr 12th midnight**

Paper Presentation: 50 points each

- Papers to be assigned by instructor.
- You present a published paper. Provide detailed description and critic – apx 15 minutes.
- To be scheduled in second half of term.
- You ask questions of other presenters.
- These will be during the application sections
- You will produce a powerpoint deck

Course Project: 750 for PhD 350 for MS

- **P1: Due Jan 31 - Project Short Proposal: 20** Due February; A brief discussion of your proposed research problem, dataset, methods, and expected challenges. No more than 500 words.
- **P2: Due Feb 28 - Project Revised Proposal: 30**
- **P3: Due April 3 - Project Draft 1: 200/70** March; Intro, Background, and Methodology Sections
- **P4: Due between April 24 and April 30 - Project Presentation: 230/100** To be scheduled in late April, 10-15 minute conference talk discussing your project's methods and key findings
- **P5: Due May 1 - Project Write Up: 270/130** Due Last Day of Class; Publication style write up of your project. See examples on CANVAS
-

*****No Classes Monday January 20th***

******SPRING BREAK March 9th – 13th***

Late Work Policy: You are expected to turn in all work on time. Because we understand that exceptional circumstances may arise, each student will be permitted to turn in two of their assignments up to 48 hours late with no penalty. Otherwise late assignment may be docked 15%.

For assistance with the written or oral communication assignments in this class, visit the Global Communication Center (GCC). GCC tutors can provide instruction on a range of communication topics and can help you improve your papers and presentations. The GCC is a free service, open to all students, and located in Hunt library. You can make tutoring appointments directly on the GCC website: <http://www.cmu.edu/gcc>. You may also visit the GCC website to find out about communication workshops offered throughout the academic year.

To find out more about any of the ways the GCC can help you, please email them at gcc-cmu@andrew.cmu.edu.

[University Policy on Cheating and Plagiarism](#)

You are expected to read and attend to the information in - [University Policy on Academic Integrity](#). The full policy is available by clicking the hyperlinked text above. Additional information about the university process for handling violations and links to resources is also available via this comprehensive website: <http://www.cmu.edu/academic-integrity/index.html>.

It is extremely important that the home-works, assignments, papers and tests that you turn in during the course reflect your own understanding. To copy answers from another person not only denies you the necessary feedback on whether or not you really understand the material, but it also compromises your integrity. In addition, those who do not succumb to cheating feel that they are “getting the short end of the stick” when they see others getting away with it. For these reasons we expect everyone to behave with integrity. It is also important that the work represents your work. Thus, any unauthorized assistance in doing the course project or homework is also considered cheating.

In this class, without explicit permission of the instructor, the following do not count as original work and would constitute cheating:

- Turning in the same or largely similar paper to another class or classes.
- Joint work with another student on a problem set or final project.
- Copying material from the web without citing it correctly.
- Plagiarism, including – copying images, graphs, and tables from published work.
- Failure to correctly cite material produced by others regardless of whether it appeared in a blog, news article, web-post, journal publication, book, etc.
- Failure to correctly cite previously published works by yourself.
- Utilizing source code developed by others or drawn from the web for your project without explicit prior permission of the instructor, and appropriate reference.

Note, papers may be assessed using automatic tools for plagiarism detection.

[Course Outline](#)

Lecture I: Introduction – What is Dynamic Network Analysis

Carley, K.M. Chapter 1, 6.1

Wasserman, S. & Faust, K. Chapters 1(1.1,1.2,1.3,1.4), 2 (2.1, 2.2, 2.3) and 3.1 and 3.2

Carley, K. M., 2004, Dynamic Network Analysis. In R. Breiger, K. M. Carley & P. Pattison (Eds.), *Dynamic Social Network Modeling and Analysis: 2002 Workshop Summary and Papers* (pp. 133-45). Washington, DC: National Academies Press.

Lecture II: Network Elite

Carley, K.M. Chapter 2

Wasserman & Faust, Chapter 5

Borgatti, Stephen P., 2005. "Centrality and network flow." *Social networks* 27(1): 55-71.

Freeman, L.C. 1979. Centrality in social networks: Conceptual clarification. *Social Networks*. 1: 215-239

Lecture III: Groups

Carley, K.M. Chapter 4

Wasserman & Faust, Chapter 7,8,9,10,(12 --- *for reference only*)

Fortunato, Santo. 2010, "Community detection in graphs." *Physics reports* 486.3: 75-174.

Newman, M. 2004. "Detecting Community Structure in Networks." *European Physics B*:321-330.

Breiger, Ronald, Scott Boorman, and Phipps Arabie. 1975. "An Algorithm for Clustering Relational Data with Applications to Social Network Analysis and Comparison with Multidimensional Scaling." *Journal of Mathematical Psychology* 12:328-383.

Davis, George, and Kathleen Carley. 2008. "Clearing the FOG: fuzzy overlapping groups for social networks." *Social Networks* 30:201-212.

Lecture IV: Network Topology

Newman, Mark. 2003. "The Structure and Function of Complex Networks." *SIAM Review* 45:167-256.

Borgatti, Stephen, and Martin Everett. 1999. "Models of Core/Periphery Structures." *Social Networks* 21:375-395.

Erdos, Paul, and Alfred Renyi. 1959. "On Random Graphs I." *Publicationes Mathematicae Debrecen* 6:290-297.

Kleinberg, Jon. 1999. *The Small World Phenomenon: an algorithmic perspective*. Cornell Computer Science Department: Cornell University.

Barabasi, Albert-Laszlo, and Eric Bonabeau. 2000. "Scale-Free Networks." *Scientific American* 288(5):50-59.

Barabási, Albert-László, and Réka Albert. "Emergence of scaling in random networks." *science* 286, no. 5439 (1999): 509-512.

Lecture V: Compare and Contrast Networks

Carley, K.M. Chapter 6.3

Wasserman & Faust, Chapter 15

Krackhardt, David. 1988. "Predicting with Networks: Nonparametric Multiple Regression Analysis of Dyadic Data." *Social Networks* 10:359-381.

Anderson, Carolyn, Stanley Wasserman, and Bradley Crouch. 1999. "A P* Primer: logit models for social networks." *Social Networks* 21:37-66.

Robins, Garry, Pip Pattison, Yuval Kalish, and Dean Lusher. 2007. "An Introduction to Exponential Random Graph (p*) Models for Social Networks." *Social Networks* 29:173-191.

Lecture VI: Issues of Analysis and Inference, Missing Data, Sampling

Borgatti, Stephen, Kathleen Carley, and David Krackhardt. 2006. "On the Robustness of Centrality Measures under Conditions of Imperfect Data." *Social Networks* 28:124-136.
